MinimServer

MinimServer is one of the best UPnP Audio Server. MinimServer collects user's music and operated by a DLNA control point such as Bubble UPNP app. You can search and playback your music file in more convenient ways.

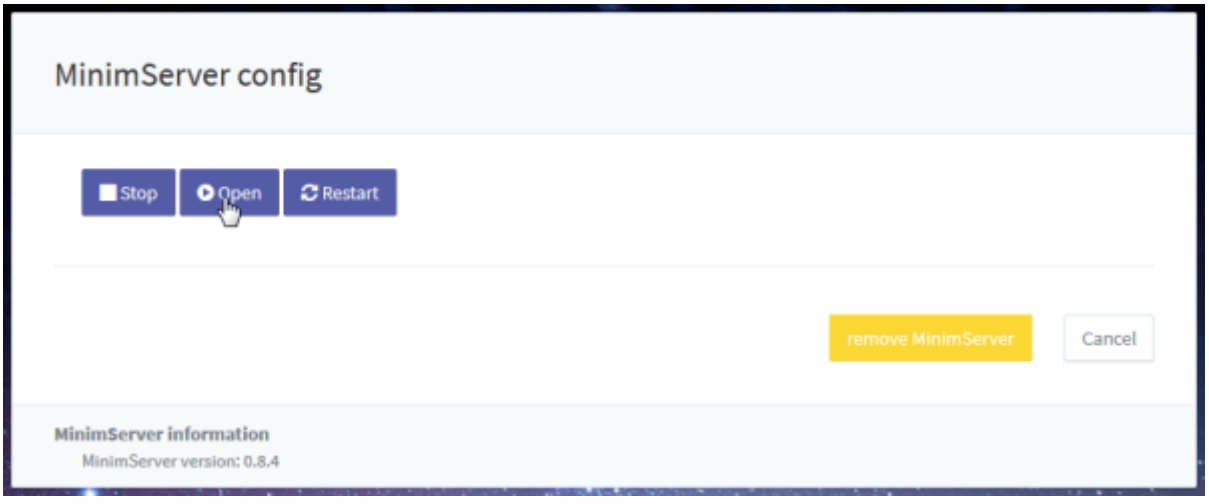

MinimServer should be installed by an user. Installation is available in MinimServer config page.

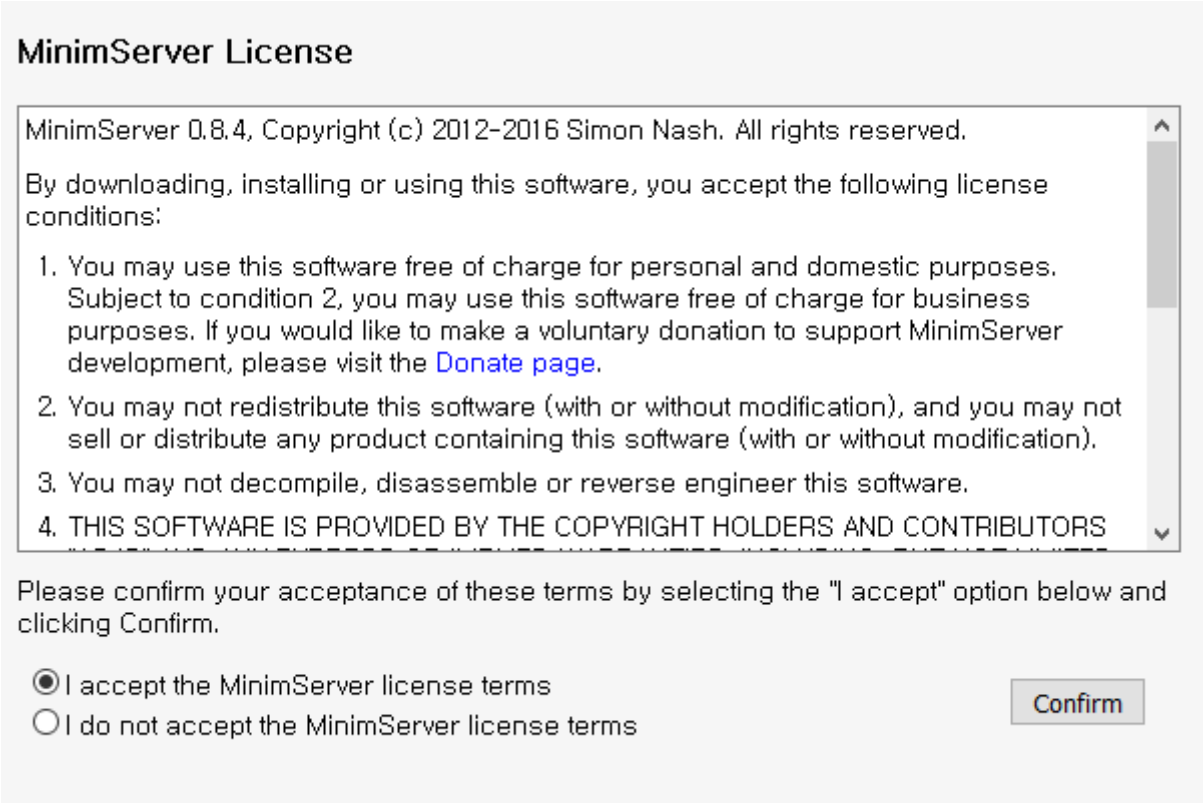

MinimServer can be controlled in MinimServer config page, start, open, stop or restart after done the installation.

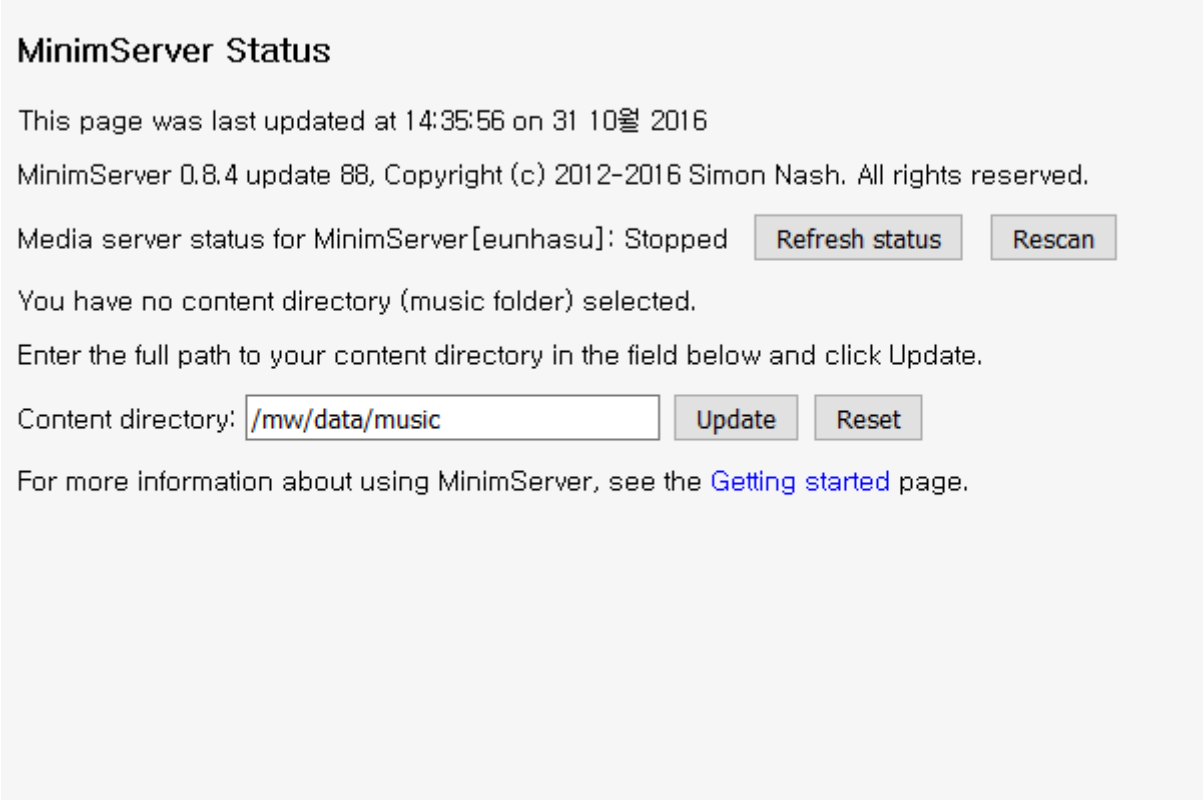

Content directory of MinimServer setting has to be set in MinimServer config page which could be open after starting MinimServer.

First, you have to accept MinimServer license terms to use.

Set Content directory and press 'Update' button and press 'Rescan' button.

- Content directory shoule be /mw/data/music to collect music in Eunhasu system.
- If /mw/data/music space are 100% full, the main system would be in abnormal status and not be operating normally.
